Fullstack Engineer · Backend Engineer · SEIT · Data Engineer
Viana do Castelo, Portugal · **profile.gabrieldaes.com** · Open to remote (worldwide) · hybrid (North Portugal)

SUMMARY

Informatics Engineering graduate working across fullstack development, backend systems, and data engineering — comfortable owning a project end-to-end, from an undocumented codebase to a merged, tested, production-deployed feature. Built and shipped **levee**, a privacy-first desktop app, alongside SEIT internship work fixing a production security flaw and building automated test infrastructure from scratch. Engineering priorities: quality, security, optimization, clean code, velocity. Uses AI tools (Copilot, Claude, Cursor) as a reviewed and validated accelerant, never a substitute for understanding code.

SKILLS

- Backend / SWE: Django, FastAPI, REST APIs, PostgreSQL, SQLAlchemy/Alembic, JDBC, JWT (RS256), Git/PR-based review
- Frontend & Client Apps: React, JavaScript, Electron, Tailwind CSS
- Testing / QA: Pytest, Playwright (TypeScript, suite architecture + reusable helpers), Vitest, E2E automation
- Data Engineering: PySpark, Airflow, dbt, ETL/ELT design, star-schema modeling, data quality validation
- Cloud & DevOps: AWS (S3, IAM, Cognito), Docker, Redis, CI/CD
- Languages: Python, SQL, JavaScript, Java

EXPERIENCE

Jun 2026 – September 2026 |Viana do Castelo, Portugal

SEIT Intern | Valuedate.io

- Owned end-to-end security and reliability work on an undocumented Django production app, ramping up on Django and the codebase with no structured onboarding: identified and fixed a critical flaw (inbox encryption using symmetric instead of asymmetric), and completed a stubbed password-health/breach-detection feature to production.
- Built the company's first automated test infrastructure from scratch (Pytest + Playwright/TypeScript, manual and automated regression), defining the testing methodology and structure independently across two production projects (partilhar.link and Concierge) — the framework was since adopted on a second team's project.
- Delivered full-stack improvements across security (MFA/recovery flows), backend logic, data handling, and UI/UX — including proposing and driving a reactive-filter redesign that removed full-page reloads — working independently with no formal handover.
- Enabled team-wide adoption of the test suite by proactively running a walkthrough session on setup and execution, ensuring continuity beyond the internship.

PROJECTS

World Bank GDP Pipeline | Personal — Data Engineering

- Paginated REST API → S3 (Hive partitioning) → PySpark → PostgreSQL star schema (JDBC) → Airflow → Docker.

Customer Churn Prediction Pipeline | Personal — ML/DE

- ML-integrated ETL, feature engineering, profit-based threshold optimization; deployed on AWS with Cognito auth.

levee | Personal — Desktop App

- Privacy-first Electron + React app tracking cloud/AI/dev-tool spend on-device; pulls billing data from 25+ providers.

EDUCATION & CERTIFICATIONS

Bachelor Degree in Informatics Engineering **Sep 2020 - Jul 2024**

- **ESTG** - Instituto Politécnico de Viana do Castelo, Portugal
- **Certifications**: DataCamp: Data Engineer Professional, Data Scientist Professional, Python Data Associate, SQL Associate, AI Engineer for Data Scientists Associate
